Billericay East	16	16	16	16	16	12	15	15

This table shows how Basildon's wards compare in terms of deprivation. Wards are listed down the left hand side, and listed across the top are the different ways in which deprivation is measured, starting with the overall deprivation score, and then moving on to its component domain scores. The higher the rank (i.e. the lower the number), the more deprived the ward is in comparison to other wards in Basildon.

- Wickford Castledon is the 5th least deprived of the 16 wards in Basildon.

- Wickford Castledon is most deprived in the domain(s) of HOUSING where it ranks as the 5th most deprived ward in Basildon

- Wickford Castledon is least deprived in the domain(s) of HOUSING where it ranks as the least deprived ward in Basildon

WICKFORD CASTLEDON - WARD DEPRIVATION

NATIONAL RANKINGS FOR DOMAINS OF DEPRIVATION

This shows how Wickford Castledon compares to all other wards in England - as above, the lower the number means the worse the relative deprivation e.g. a national percentile of 10 means that the ward is in the 10% most deprived in England

	MAJOR MEASURES								SUB-MEASURES

WICKFORD CASTLEDON - APPENDIX

Who made this?

Ward profiles for all Basildon's 16 wards were put together by Basildon Council's Corporate Research and Data Analytic team, part of Policy, Performance and Review. If you have any questions about the profiles you can contact us at Basildon St Martin's Square (first floor) Profiles for all the wards can be found in Sharepoint (john.oguntimehin@basildon.gov.uk)

What are mean, median and mode?

These are different types of averages that have different uses when working with statistics.

The mean is the total of the numbers divided by how many numbers there are. When people use the phrase 'average' this is usually what they are referring to.

The median is the middle value of any particular list of numbers if they were sorted into ascending or descending order. This is particularly useful when looking at income distributions, as the mean average might be skewed by people with very high or very low incomes.

The mode is the value that appears the most within a given list.

What are the Indices of Multiple Deprivation?

Since the 1970s the Department of Communities and Local Government calculated local measures of deprivation in England. The increasing availability of administrative data at local levels has driven developments in the definition and measurement of deprivation. This profile reflects the latest version of these statistics which were constructed in Jan. 2020 and form the English Indices of Deprivation 2019. Deprivation covers a broad range of issues and refers to unmet needs caused by a lack of resources of all kinds, not just financial. The English Indices of Deprivation attempt to measure a broader concept of multiple deprivation, made up of several distinct dimensions, or domains, of deprivation.

<https://www.gov.uk/government/statistics/english-indices-of-deprivation-2019>

How were the ward rankings for the Indices of Multiple Deprivation calculated?

Index of Multiple Deprivation, Ward Level Sub-Domain estimates - Summary scores for electoral wards have been calculated by the Basildon Council based on London Health Observatory and North East Public Health Observatory methodology, using methods which are consistent with those used by DCLG, i.e. averages of LSOA-level scores which have been population-weighted using adopted mid-year estimates.

How were the weighted education statistics by place of pupil residence calculated?

Education place of pupil residence methodology - Ward figures was determined by matching pupil postcode against national education postcode in files which enable ECC to assign each pupil to a ward of residence. EYFS is collected from schools during May – July and submitted by ECC to DfE for inclusion in national aggregations. KS2 and KS4 are externally marked and a complete pupil file is provided to ECC by DfE through Key to Success.
